EDUCATION

University of Texas Rio Grande Valley

Bachelor of Science, Computer Science | 3.7 GPA

Edinburg, Texas

December 2027

Relevant Coursework: Algorithms & Data Structures, Computer Organization, Object-Oriented Programming, Software Engineering, AI Agent Programming, Database & Implantation, Computer Networks

Experience

JPMorgan Chase – Software Engineer

Plano, TX

Internship | Java, Spring-Boot, SQL/JPA, Kafka, REST API

Summer 2026

- Developed and deployed production REST APIs that automated failed transaction recovery, improving operational efficiency while preserving data integrity across concurrent system processes.
- Designed SQL/JPA repositories and data access layers to query, update, and audit transaction records, enabling reliable traceability across enterprise applications.
- Delivered a production feature from design through deployment by analyzing a large microservice codebase, implementing backend services, performing UAT testing, and supporting production releases.

Projects

Invoice Extraction Backend (MCP-Orchestrated)

Independent Project | Python, FastAPI, Uvicorn, REST, Json RPC

- Built a backend document-processing pipeline that extracts structured financial data from invoices using an MCP-orchestrated flow
- Orchestrated OCR, LLM-based extraction, and validation tools through MCP server, enabling reliable multi-step processing.
- Developed RESTful APIs that exposed document-processing services for seamless integration with external applications.

JPMorgan's Code-For-Good

Fall 2026

Independent Project | Python, FastAPI, OpenAI APIs, REST, OOP |

Plano, Texas

- Earned 2nd Place by developing a full-stack web application for the Blackheart Association
- Designed secure authentication and authorization features along with a real-time resource management dashboard using React/Next.js and a Flask REST API.
- Integrated the Gemini API to power AI-driven recommendation logic, enabling automated, data-informed resource allocation decisions for nonprofit staff.

AEGIS Desktop

Independent Project | Python, Ollama

- Built a multi-agent AI platform that autonomously analyses Windows system performance and generates optimization recommendations.
- Implemented an iterative Diagnose, Plan, observe workflow to continuously evaluate system health and recommend performance improvements.

Leadership & Involvement

ColorStack | Member

- Active participant in the community, supporting fellow students by sharing technical opportunities & guidance.

TECHNICAL SKILLS

Languages | C++, Python, Java, HTML, CSS, JavaScript,

Developer Tools | Git, VS Code, FastAPI, RESTful API

Certifications | Udemy Full-Stack Developer Certificate | Algorithms & Data Structures C++
